

Objective

The objective of this assignment is to collect comprehensive school information from all locations provided and organize the data according to the supplied template and sample dataset.

The entire process must be performed through automated data collection and processing workflows. Manual data collection should only be used for validation and quality assurance purposes where necessary.

The final output must match the structure, formatting, and data standards demonstrated in the provided sample data.

Resources

1. Location List

School	city	category	website	description	verification_ status	address	phone
The Brearley School	New York	Private Schools	brearley.org	All-girls K–12 on the Upper East Side; consistently ranked among NYC's most academically rigorous independent schools with exceptional Ivy League placement.	Verified	610 East 83rd Street, New York, NY 10028	(212) 744-8582

Trinity School	New York	Private Schools	trinityschoolnyc.org	Founded 1709; one of the oldest schools in the US; Episcopal day school K–12 on the Upper West Side; 100% of seniors matriculate to four-year colleges; renowned Classics programme.	Verified	139 West 91st Street, New York, NY 10024	(212) 873-1650

Assignment Scope

You are required to process every location listed in the Location Sheet.

For each location:

- Identify all applicable schools within the specified area.
- Collect all required school information fields.
- Verify information using reliable and publicly available sources.
- Format the collected data according to the provided template.
- Ensure consistency with the sample dataset.

This assignment requires complete data collection coverage. Partial completion of locations or selective collection of schools is not acceptable unless explicitly approved.

Data Collection Requirements

School Discovery

For each assigned location:

- Identify all schools relevant to the scope of the project.
- Ensure schools belong to the correct location.
- Avoid duplicate school records.
- Verify school existence through reliable sources.

Data Collection

Collect all fields required by the provided template.

Requirements

- Populate every mandatory field.
- Ensure information is current and accurate.
- Follow the same data formatting standards used in the sample dataset.
- Preserve naming consistency across all records.
- Standardize phone numbers, websites, addresses, and other structured fields where applicable.

Important

The sample data provided should be treated as the formatting standard for this project.

All newly collected records must follow the same structure, formatting conventions, and data presentation style as the sample data.

Data Formatting Requirements

The final spreadsheet must match the provided template exactly.

Mandatory Rules

- Do not rename columns.
- Do not reorder columns.
- Do not add extra columns.

- Do not remove existing columns.
- Do not modify worksheet names unless instructed.
- Preserve formatting consistency throughout the file.

All populated records must align with the sample dataset format attached with this assignment.

Automation Requirements

This project is intended to be completed using automated data collection methods.

Mandatory Requirements

- Use scripts and automation wherever possible.
 - Build reusable extraction workflows.
 - Design the solution so it can process multiple locations efficiently.
 - Minimize manual intervention.
 - Ensure repeatable and scalable processing.
-

Code Quality Requirements

The implementation should follow professional software development standards.

Expectations

- Clean and maintainable code
 - Modular architecture
 - Proper configuration management
 - Error handling and retry mechanisms
 - Logging for failures and skipped records
 - Documentation for setup and execution
-

Data Validation Requirements

Before submission, validate the following:

Accuracy Validation

- School name is correct
- Address is correct
- Website is valid
- Contact information is accurate
- Location mapping is correct

Duplicate Validation

- No duplicate schools
- No duplicate records
- No duplicate contact information caused by processing errors

Completeness Validation

- Mandatory fields are populated
 - Required locations are fully processed
 - Data aligns with template requirements
-

Coverage Requirements

This assignment requires full coverage of all list of schools provided.

Expectations

- Process every assigned location.
- Collect all schools that meet the project criteria.
- Do not submit partial datasets without prior approval.
- Clearly report any locations where information could not be found.

If information is unavailable for a school, document the reason rather than leaving unexplained gaps.

Source Control Requirements

All code must be maintained in Git.

Requirements

- Push source code to a public GitHub repository.
 - Share the repository URL upon completion.
 - Include setup instructions in the README.
 - Include execution instructions.
 - Include dependency information.
 - Use meaningful commit messages throughout development.
-

Deliverables

1. Completed Spreadsheet

Provide a completed copy of the template populated with all collected school data.

Do not modify the original template.

2. Source Code Repository

Provide:

- Public GitHub repository URL
- Complete source code
- Documentation
- Execution instructions

3. Missing Data Report

Provide a separate sheet or report containing:

Schools Not Found

Locations where no schools matching the criteria could be identified.

Missing Information

Schools where certain fields could not be verified.

Processing Errors

Records that could not be processed due to technical issues.

Include:

- Location Name
 - School Name
 - Missing Field(s)
 - Reason
-

Quality Standards

The following standards are mandatory:

- No fabricated data.
- No estimated values.
- No guessed contact information.
- No guessed website URLs.
- Data must be sourced and verifiable.
- Formatting must remain consistent across the entire dataset.
- Final output must match the provided template structure exactly.
- Final output must follow the same formatting conventions as the attached sample dataset.

Accuracy, completeness, and consistency are the primary success criteria for this assignment.

Submission Checklist

Before submission, verify:

- All locations have been processed.
- All schools have been collected.
- Mandatory fields are populated.
- Formatting matches the template.
- Formatting matches the sample dataset.
- Duplicate records have been removed.
- Validation checks have been completed.
- GitHub repository has been shared.
- Missing data report has been included.

Only submit after completing the above verification steps.
